

Resolution on Global Mental Health and Substance Use Disorders

An official statement from the Global Alliance on Behavioral Health and Social Justice (formerly the American Orthopsychiatric Association) prepared by the Global Mental Health Task Force

As a behavioral health organization that is global in scope and that embeds its work in principles of human rights and social justice, we are committed to raising awareness and seeking solutions regarding the crisis in mental health and substance use disorders.

Indeed, the numbers are staggering:

- 1 in 4 people at some point in their lives will be affected by mental or neurological disorders.
- About 450 million people are now struggling with their mental health and/or addictions.
- Mental health disorders are among the world's leading causes of disability and ill-health.
- The treatment gap between those who need care and those who actually receive it is estimated at 76–85% for low- and middle-income countries and 35–50% for high-income countries.

To address these challenges and in keeping with our values and our approach, we advocate for a focus on prevention and greater investment in treating individuals struggling with mental health and substance use concerns. We support prevention efforts that include tackling factors that make individuals vulnerable (e.g., poverty; exclusion; violence) and implementing initiatives and policies that improve human rights protections. We further support treatment efforts that recognize that all people should be treated with dignity, enable individuals to function in the least restrictive environment possible, and are culturally appropriate, easily accessible, and involve consumers, families, and communities.
